

# Building the User Interface

Section seven

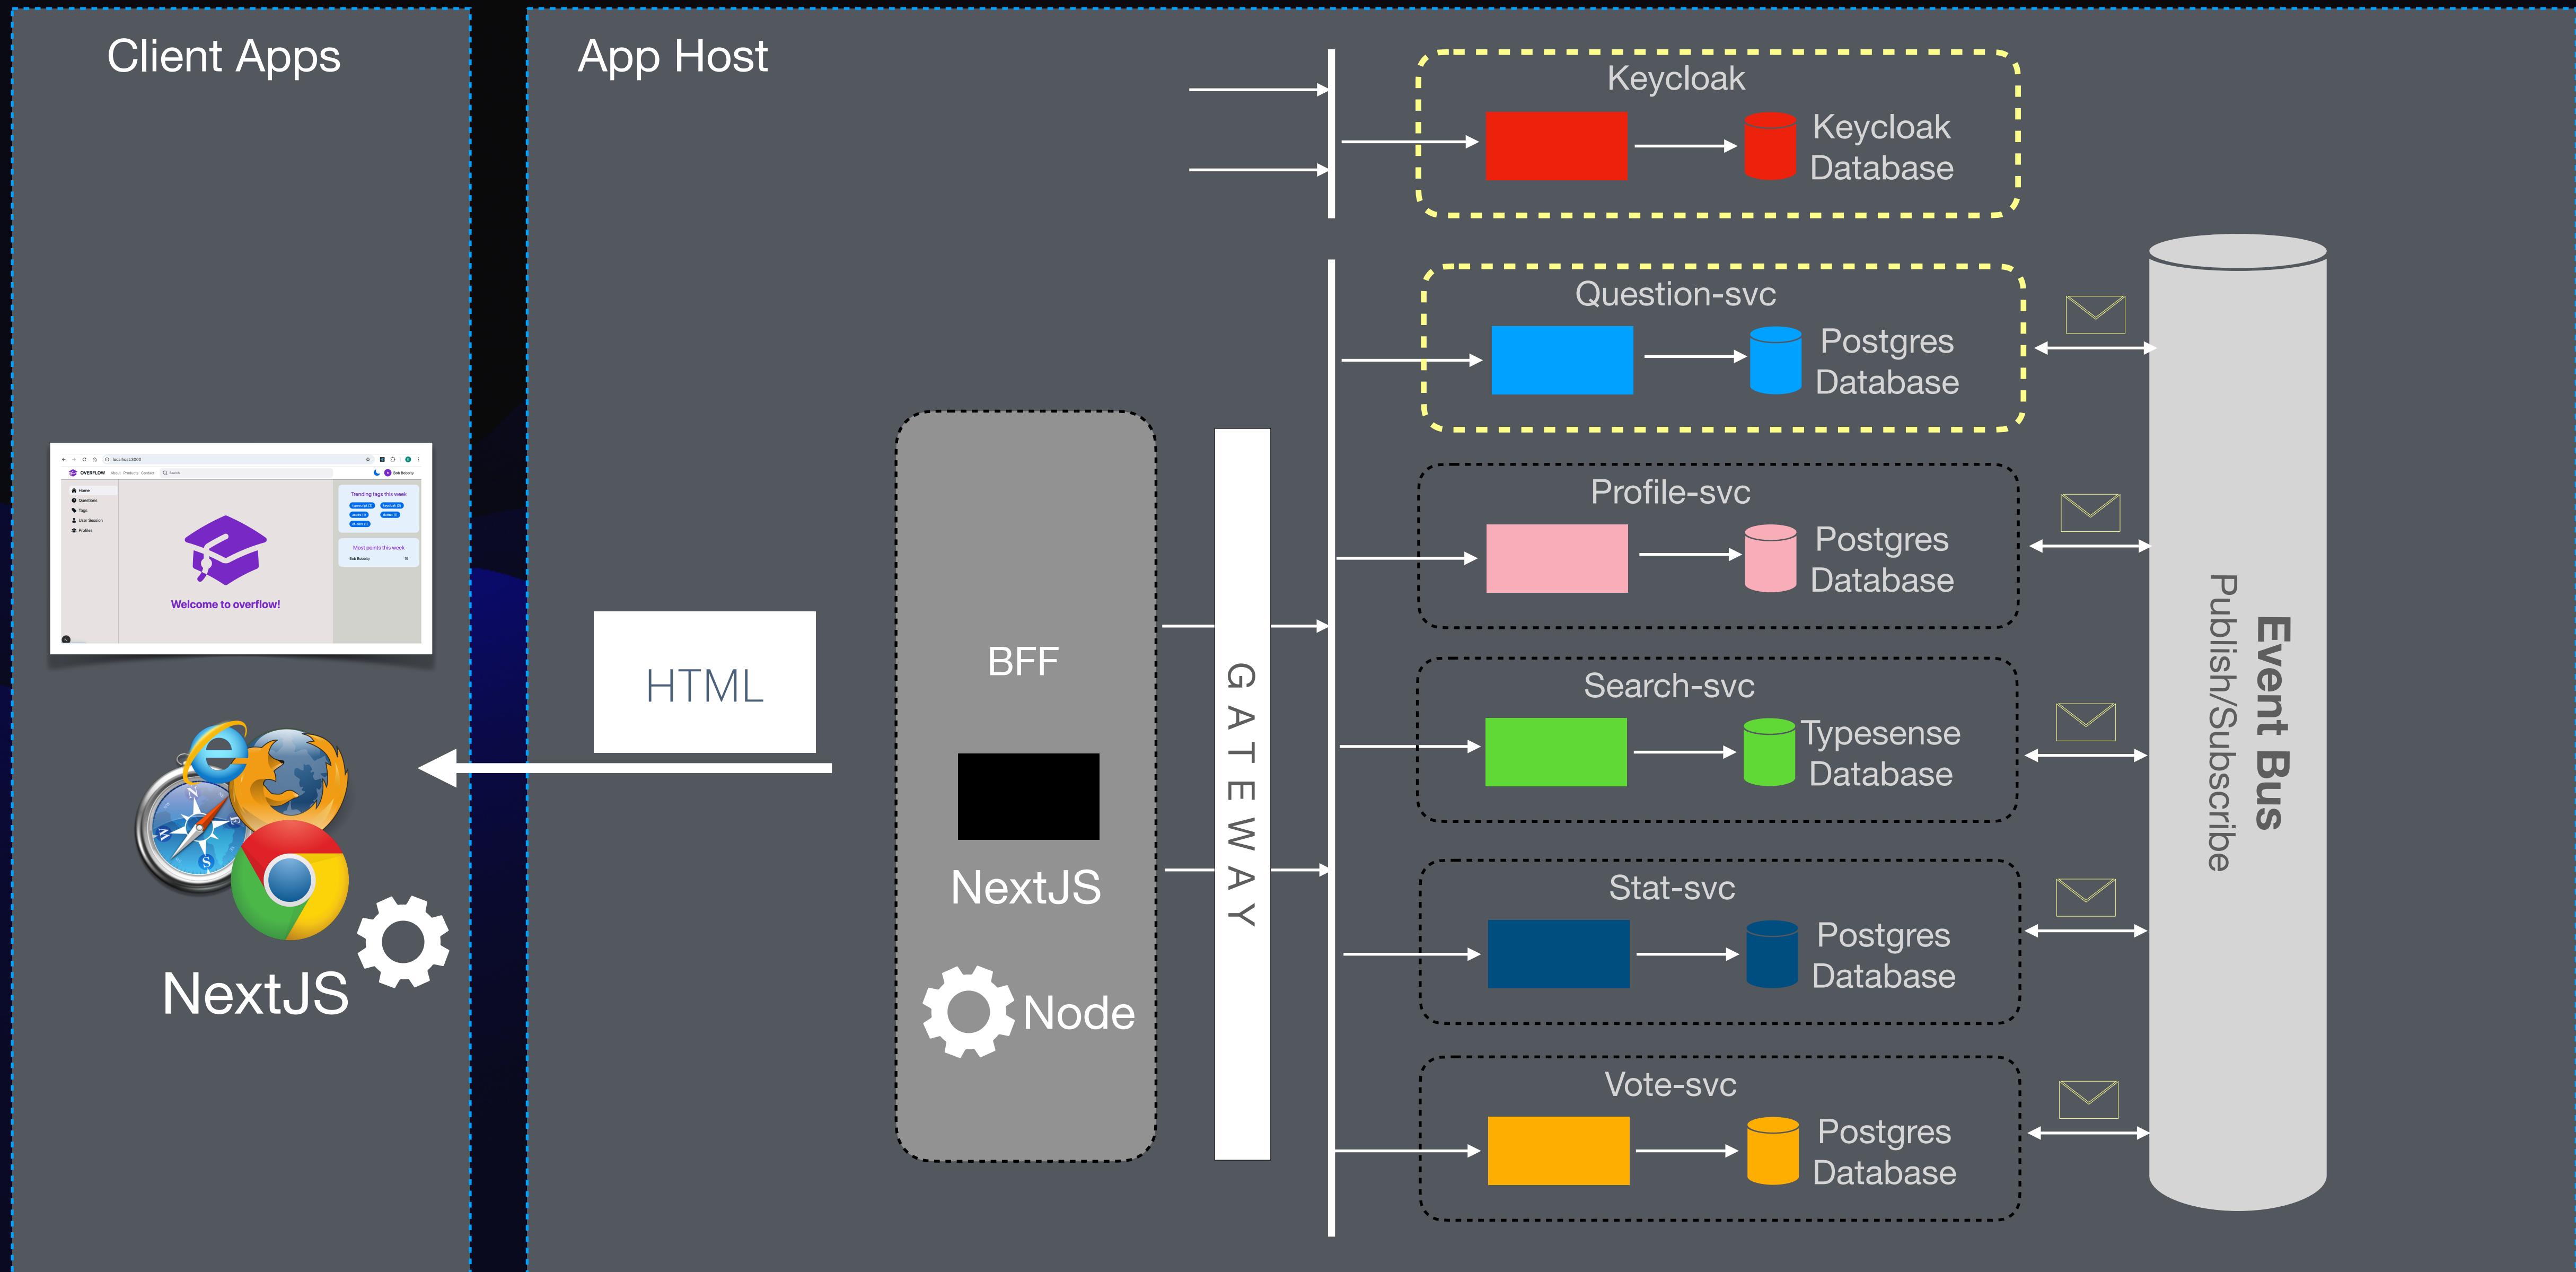

The goal of this  
section

To create and build the UI that uses the  
backend services we have created

To create the layout and structure to  
display the content of the data using  
NextJS

# Overflow Architecture

# Why next.js and not <insert favorite framework here>

- Server side rendering
- Server actions
- Will act as a BFF later on.
- Good fit for the app
- It's an opinionated React based framework, and comes with routing out of the box

# Styling

- Tailwind CSS 4
- HeroUI (formally NextUI)

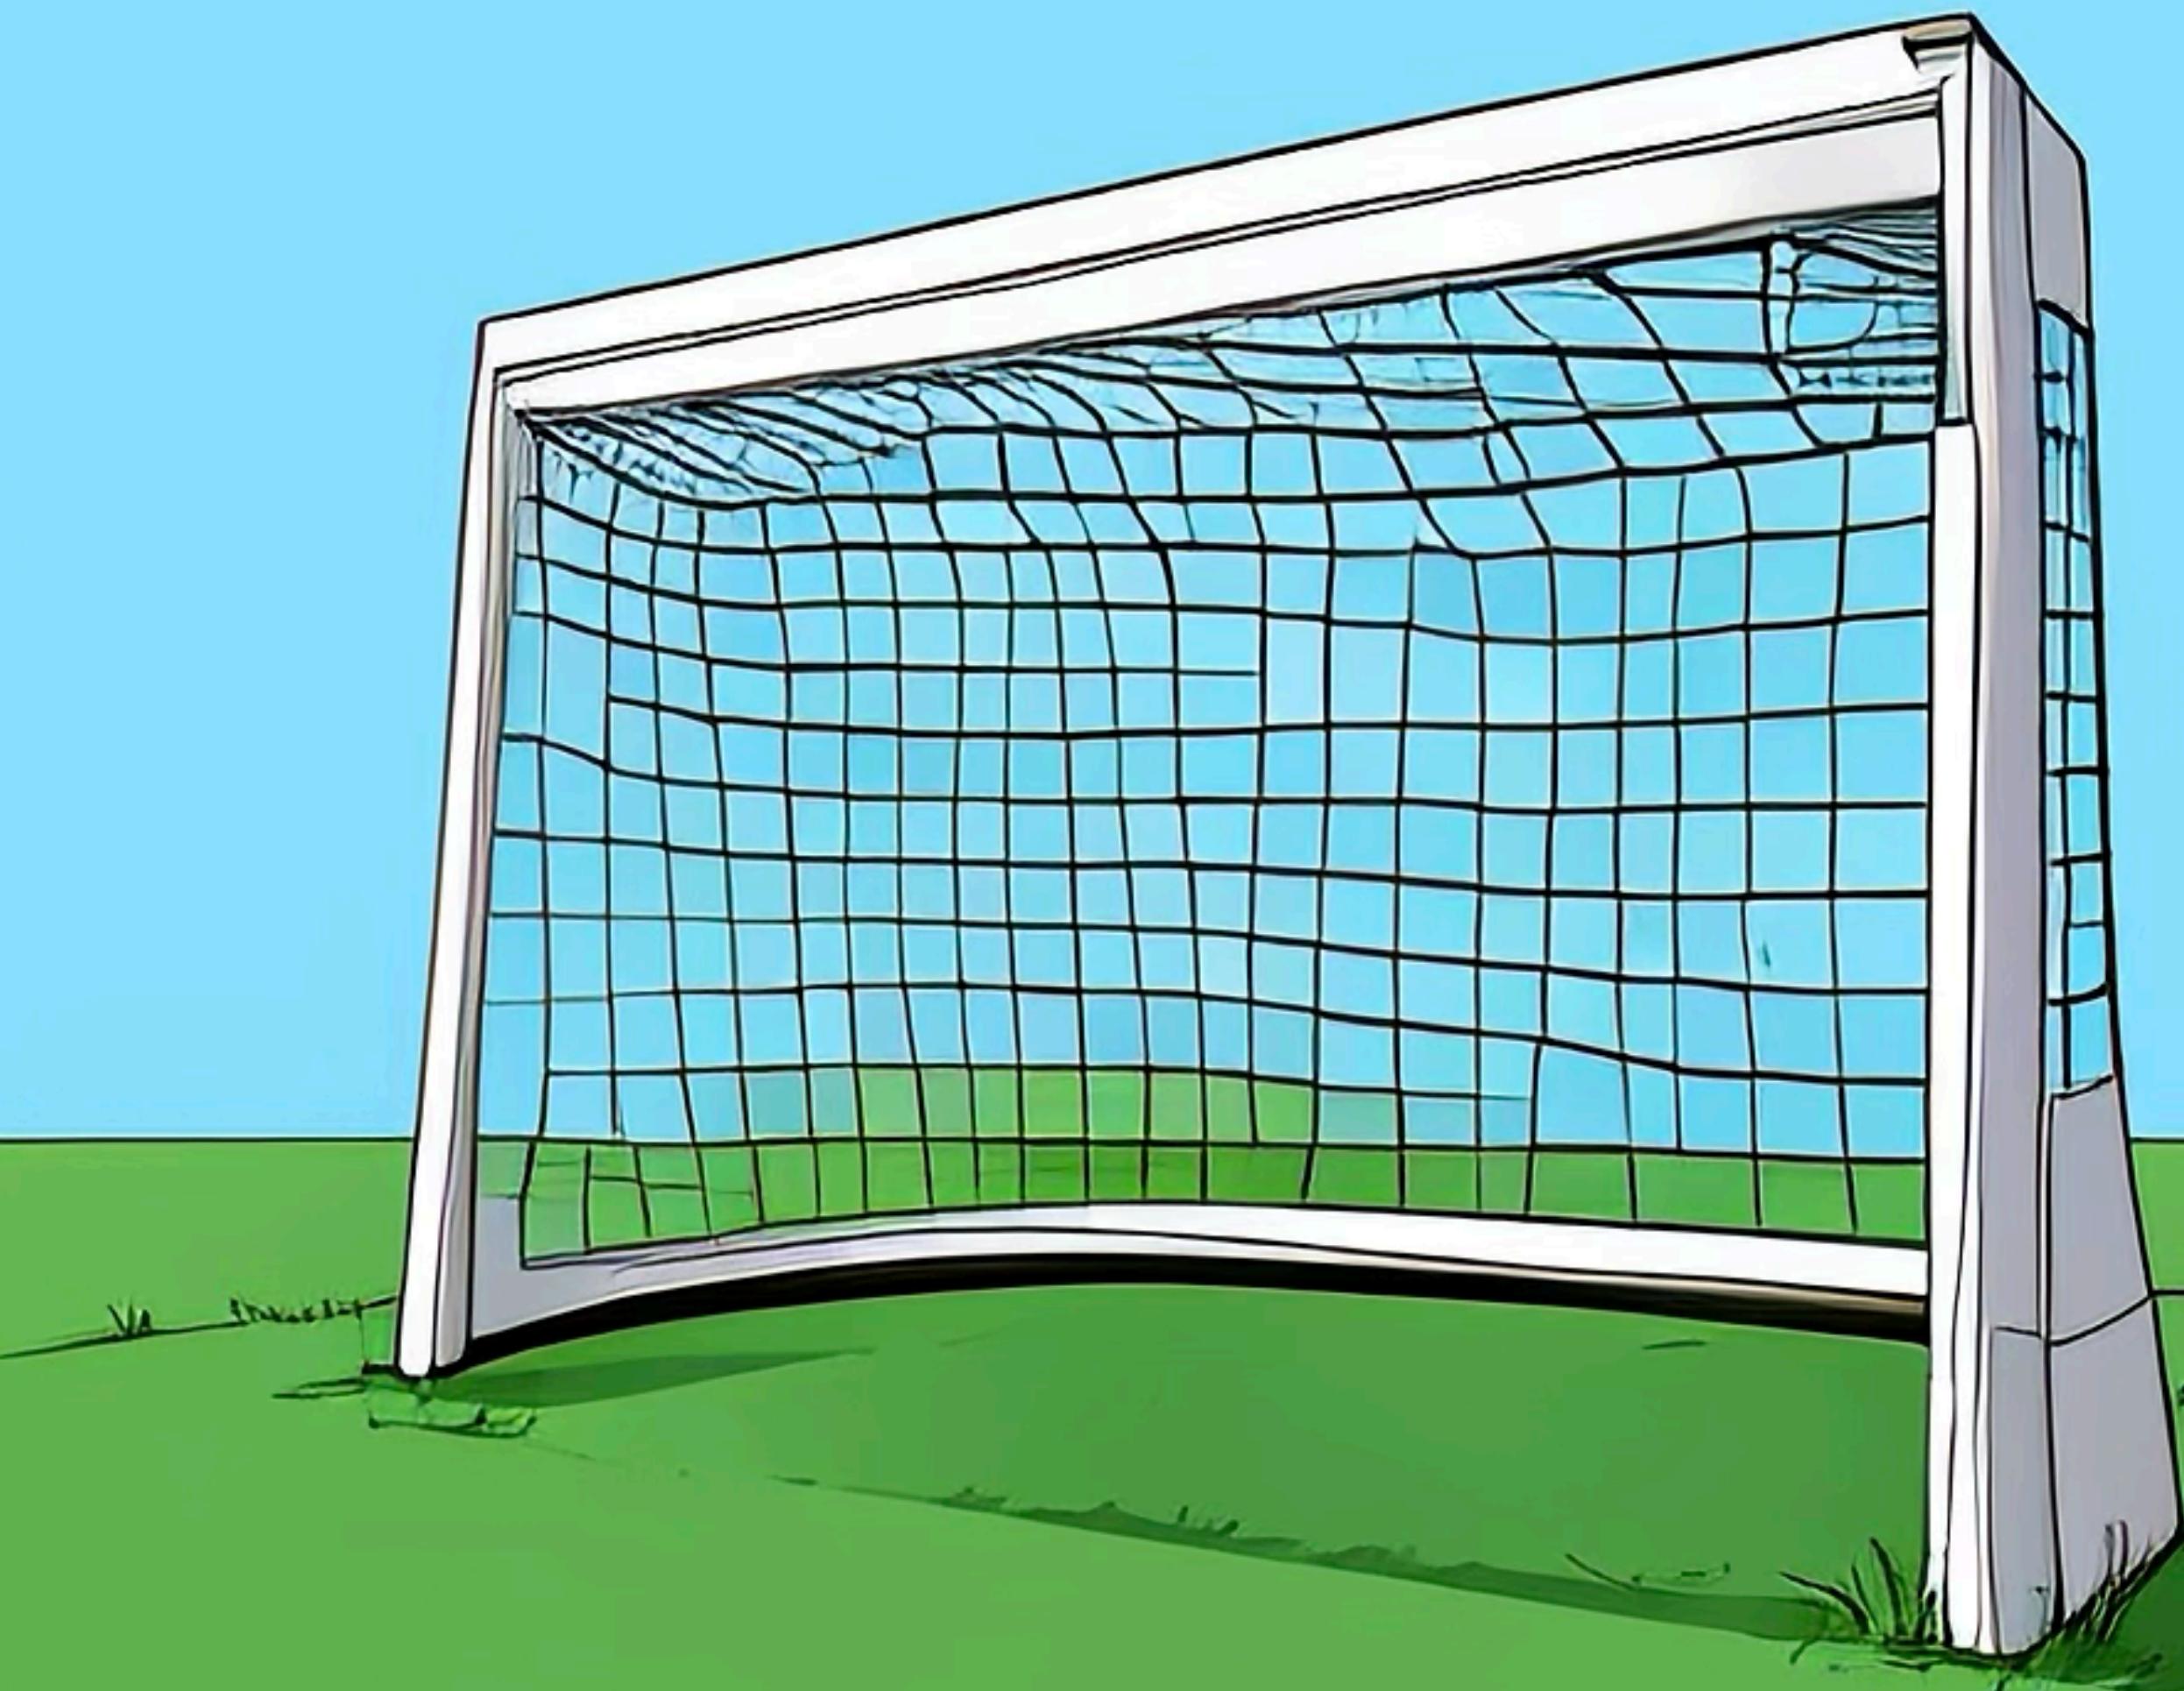

Can I skip this?

I've never used NextJS before!

# Demo

# Summary of Section 7

The goal of this  
section

To create and build the UI for the that  
uses the backend services we have  
created

To create the layout and structure to  
display the content of the data
